INSTALLATION

Using a small flat head screw driver or non-marring plastic pry tool, remove each of the two covers by inserting tool in to divot at top.

Using a pair of needle nose pliers, simply twist the socket out counter clockwise to reveal the incandescent bulb.

Remove the bulb from the socket by pulling straight out with your fingers, install the LED bulb the same way you removed the original bulb.

LED bulbs are polarity sensitive so test the bulbs by turning on your parking lamps before re-installing. If they do not turn on, simply remove the bulb and re-install after flipping the base of the bulb 180 degrees.

Enjoy!
