

WHAT IS CANBUS?

CANBUS is a system that some vehicles have built into them from the factory. For example, Audi, BMW, VW, Dodge, etc. A common way of figuring out if your vehicle has CANBUS is to pull out a bulb and see if your dash gives you an error or "bulb out" message. If so, a CANBUS ballast (HID applications) or CANBUS (LED applications) would be required to avoid any errors as mentioned previously. Our CANBUS bulbs have built in load resistors in which mimic the draw or "load" of a standard halogen bulb which allows the car to run aftermarket LEDs without errors.
